

ABOUT THIS REPORT

GRI: 102-46, 102-47, 102-50

The Sustainability division, which reports directly to the Senior Vice President and Chief Public Affairs Officer, has prepared this report that describes our ESG performance, initiatives and goals.

This is Sempra Infrastructure's first Sustainability Report which was drafted following the Core option of the Global Reporting Initiative (GRI) Standards and includes content and information pertaining to material ESG topics. We intend to adhere to reporting practices based on the GRI Reporting Principles for defining reporting content and quality: stakeholder inclusiveness, sustainability context, materiality, completeness, accuracy, balance, clarity, comparability, reliability, and timeliness. An independent third party reviewed this report and audited 40 GRI contents for this year, as established in the scope of the Independent Assurance Report.

In addition, the report is designed to be aligned to the following standards, frames of reference, and sustainability principles:

- Sustainability Accounting Standards Board (SASB)
- Recommendations of the Task Force on Climate-Related Financial Disclosure (TCFD)
- Communication on Progress (COP)
- UN Sustainable Development Goals (SDGs)

Given that Sempra Infrastructure Mexico is a signatory of the UN Global Compact since 2015, this report constitutes its seventh COP. We have included herein the progress made in terms UN Global Compact Ten principles and our contribution to the SDGs.

REPORTING SCOPE

Unless otherwise specified, data in this report summarizes material ESG information as of December 31, 2021 or spanning the period between January 1 and December 31, 2021, as the context requires, for the LNG and Net-Zero Solutions, Energy Networks and Clean Power business lines. We include 100% of the ESG data for all operating companies where we had at least a 50% ownership interest, including 100% of the information pertaining to joint ventures in which the company holds a stake of 50% or more: Los Ramones Norte Pipeline and Energía Sierra Juárez wind park. We also report ESG data for the unconsolidated entity Cameron LNG, due to its relevance to our business. We include 50.2% of its ESG data based on our ownership share prior to the sales of non-controlling interests in SI Partners described below. Additional ESG data exclusions or additions are noted throughout our report.

Our report includes the activities of our companies that liquefy, transport and store natural gas, LPG, and ethane; store liquefied natural gas; distribute natural gas; receive, store, and deliver refined products; as well as the activities of our combined-cycle power plant and our wind and solar facilities, all of which generate electric power.

This report does not include environmental and workforce performance information on the projects that are currently under development or construction. We expect that this information will be included in future reports once they start operating.

Nevertheless, health and safety indicators and social investment figures do include information on all our operating assets and on all projects under construction.

Throughout the report we describe the formulas used to calculate the indicators and we specify the business units for which we are reporting the information. We have also identified the changes in our metrics with respect to information reported in prior years.

All figures included in the report are presented in U.S. dollars. Unless otherwise specified, we employed an exchange rate of \$20.5835 MXN pesos per US\$1.

Unless otherwise specified, whole numbers included in the report represent rounded figures; we rounded up all decimals of 0.5 or above and rounded down decimals below 0.5.

In October 2021, the Sempra Infrastructure platform was formed by combining Sempra's LNG business and its ownership of IEnova under a single platform. Concurrently, Sempra sold a 20% noncontrolling interest in SI Partners to KKR for cash proceeds of approximately \$3.2 billion. Sempra subsequently sold an additional 10% non-controlling interest in SI Partners to ADIA for cash proceeds of \$1.73 billion. Following such sales, Sempra owns a 70% controlling interest in SI Partners, and KKR and ADIA own a 20% and 10% non-controlling interest, respectively. As the transaction forming Sempra Infrastructure platform closed more than six months into the year, in this report, we do not make ownership adjustments for the sales of interests in SI Partners described above.

MATERIAL ESG INFORMATION AND ESG GOALS

In 2021, IEnova (sometimes referred to herein as Sempra Infrastructure Mexico) carried out its most recent ESG materiality assessment. With the creation of the Sempra Infrastructure platform, we expect to conduct a new assessment in 2022 to evaluate the materiality of various ESG topics to our businesses. We believe that our integration helps strengthen our procedures and systems.

As we move forward with efforts to deliver on our goals, Sempra Infrastructure continues to monitor the evolving regulatory landscape and how our business lines are supporting the energy needs of the communities and customers they service and meeting legal and regulatory requirements and federal, state, and local climate policies. We understand that a successful energy transition will require industry leadership, technological advancements that are economically and technically feasible, and broad coordination and support from every level of government and among industry participants, among other things.
